2. Code Quality & Complexity Hotspots Analysis

Objective: Reduce complexity through helper methods, domain services, and the Strategy/Command patterns.

Date: 2026-09-29 11:19:11 IST | **Scope:** `ksabai-gl/php1` (Invoice Ninja) — Laravel 11 (PHP 8.x) backend + React 18 / TypeScript (`@tanstack/react-query`) frontend

Executive Summary

EXECUTIVE SUMMARY

Code-quality health is **High Risk**, driven by three compounding problems. First, **oversized units**: 26 backend files exceed 1,000 LOC (led by `PdfBuilder` at 2,410 and `TemplateService` at 1,828) and at least 31 methods exceed 200 LOC — the worst being `HtmlEngine::buildEntityDataArray()` at ~786 LOC, a single method that assembles hundreds of template variables with an inline ternary on nearly every line (effective cyclomatic complexity ~220, ~40 branch statements even excluding ternaries). Second, **catastrophic duplication in the frontend**: the *entire* committed React tree is a generated scaffold — 801 near-identical `*.tsx` pages (all exactly 305 LOC) plus 800 identical 404-line test files, 567,224 LOC in total, produced by `tools/generate_enterprise_modules.php`, whose own header states it exists "to expand LOC footprint." Each page repeats 40 copy-pasted `helper1..40` scoring functions that differ only by a magic multiplier, and embeds two inline `fetch('/api/v1/...')` calls with mock-data fallbacks. Third, **backend duplication** appears in parallel engines (`HtmlEngine` vs `VendorHtmlEngine`) and mirrored services (`Invoice/UpdateReminder` vs `Quote/UpdateReminder`). Layers covered: **Backend** — 2,442 PHP files in `app/` (excluding 4 pure data-array providers such as `SMSNumbers.php`); **Frontend** — 1,601 generated files under `resources/js/enterprise/**` (801 components + 800 test suites). Churn, defect-density, and ownership metrics (H6–H8) could **not** be measured: the snapshot is a shallow clone with only 10 commits, a single author, and no fix/bug commits — those hotspots are marked *n/a* and their weight is redistributed in the Hotspot Score.

HIGHEST CYCLOMATIC
COMPLEXITY

OVERALL CODEBASE RATING — CODE QUALITY & COMPLEXITY

High Risk

Driven by High-Risk Large Classes (H2), Large Functions (H3), Cyclomatic Complexity (H1), and near-total Duplication (H4/H5) from the generated frontend scaffold and its LOC-padding boilerplate (H9).

HOTSPOT SCORE (WEIGHTED COMPOSITE)

87 / 100 — High Risk

Hotspot Score = (Cyclomatic Complexity × 25%) + (Code Churn × 25% → n/a) + (Defect Density × 20% → n/a) + (Class/Function Size × 15%) + (Business Logic Duplication × 10%) + (Developer Ownership Risk × 5% → n/a); 50% of weight is unmeasurable (shallow clone) so it is redistributed proportionally → Cyclomatic 50%, Size 30%, Duplication 20% = (85×0.50) + (90×0.30) + (85×0.20) = 42.5 + 27.0 + 17.0 = 87

2.1 Benchmark Ratings Summary

One row per hotspot. "Measured" is the real value found; "Rating" is the band it falls into (worst KPI wins). This table is the source for the Overall Codebase Rating banner above.

#	Hotspot	Primary KPI	GOOD	MODERATE	HIGH RISK	Measured
H1	High Cyclomatic Complexity	Max complexity per method	<10	10–20	>20	~220 (<code>HtmlEngine::buildEntityDataArray</code> , ternary-inclusive); ~40 branch-only; several methods >30
H2	Large Classes	Largest class LOC	<300	300–1000	>1000	2,410 max (<code>PdfBuilder</code>); 26 files >1,000 LOC; 259 files >300 LOC
H3	Large Functions	Largest function LOC	<50	50–200	>200	~786 max (<code>HtmlEngine::buildEntityDataArray</code>); 31 methods >200 LOC
H4	Business Logic Duplication	Duplicated business logic %	<5%	5–10%	>10%	>10% — parallel <code>HtmlEngine</code> / <code>VendorHtmlEngine</code> , mirrored <code>Invoice</code> / <code>Quote</code> <code>UpdateReminder</code> , 32,000 <code>helperN</code> scoring fns
H5	Duplicate Code (general)	Overall duplicate code %	<5%	5–10%	>10%	~60% — 567,224 LOC of near-identical generated frontend (1,601 files from 2 templates)
H6	High Churn Areas	Monthly changes (top files)	<5	5–10	>10	n/a — shallow clone (10 commits, recent-only); top file changed 3×
H7	Defect-Prone Files	Fix commits (hottest file)	1–3	4–5	>5	n/a — 0 commits matching <code>fix</code> / <code>bug</code> / <code>hotfix</code> in shallow history
H8	Ownership Issues	Top-author ownership %	>80%	60–80%	<60%	n/a — single author (<code>ksabai-gl</code>) across the entire snapshot

H9	Generated Dead / Boilerplate Code (additional)	% of code that is generated LOC-padding with no distinct behavior	<5%	5–15%	>15%	~60% — <code>tools/generate_enterprise_modules.php</code> emits 1,601 files "to expand LOC footprint"
H10	Magic Numbers & Primitive Obsession (additional)	Files whose domain "logic" is bare literals/string concat	<5%	5–15%	>15%	800 pages compute scores as <code>row.priority * <1..40> + row.name.length</code> and concat <code>code::status::score</code>

Additional hotspots: two beyond the standard set were observed — **H9 Generated Dead/Boilerplate Code** (KPI: share of the codebase that is machine-generated LOC-padding with no distinct behavior; >15% = High Risk — this codebase is ~60%) and **H10 Magic Numbers & Primitive Obsession** (KPI: share of files whose "business logic" is bare numeric/string literals; the scaffold's `helperN` scoring is nothing but magic multipliers and string concatenation).

Hotspot Score breakdown

Churn (H6), Defect Density (H7), and Ownership (H8) are unmeasurable on this shallow, single-author snapshot, so their combined 50% weight is redistributed proportionally across the three measurable components (Cyclomatic 25→50%, Size 15→30%, Duplication 10→20%).

Component	Weight	Sub-score (0–100)	Weighted
Cyclomatic Complexity	25% → 50%	85	42.5
Code Churn	25%	n/a	—
Defect Density	20%	n/a	—
Class/Function Size	15% → 30%	90	27.0
Business Logic Duplication	10% → 20%	85	17.0
Developer Ownership Risk	5%	n/a	—
Hotspot Score	100%		87 / 100

2.2 Hotspot-by-Hotspot Evidence

H1. High Cyclomatic Complexity CRITICAL

Benchmark: `Max complexity per method = ~220 (ternary-inclusive), ~40 branch-only` → falls in the **High Risk** band (Good <10 · Moderate 10–20 · High Risk >20).

The single worst method is `HtmlEngine::buildEntityDataArray()` — ~786 LOC that build a template-variable dictionary, with an inline ternary on nearly every line:

```
// app/Utils/HtmlEngine.php:127
public function buildEntityDataArray(): array
{
    if (! $this->client->currency()) {
        throw new Exception(debug_backtrace()[1]['function'], 1);
    }
    // ...
    $data['$show_shipping_address'] = ['value' => $locationData['shipping_exists'] &&
    $this->settings->show_shipping_address ? 'flex' : 'none', 'label' => ''];
    $data['$show_shipping_address_block'] = ['value' =>
    $locationData['shipping_exists'] && $this->settings->show_shipping_address ? 'block' :
    'none', 'label' => ''];
    // ~180 more ternary-laden assignments follow, all in one method
```

`BaseRepository::save()` and `BaseController::timeConstrainedResponse()` are also branch-dense:

```
// app/Http/Controllers/BaseController.php:707 (~259 LOC, CC ~31)
protected function timeConstrainedResponse($query)
{
    $user = auth()->user();
    if (request()->hasHeader('X-React')) {
        $this->manager->
        >parseIncludes(['account', 'user.company_user', 'token', 'company']);
        request()->merge(['created_at' => time()]);
        // long chain of conditional include/transform branches ...
```

Why it matters here: These methods sit on the billing-critical PDF/template and API-response paths. A single method with ~40+ independent branches cannot be exhaustively unit-tested, so template or include-map changes are made "by eye" and regressions surface in customer-facing invoices. High branch density is the strongest predictor of defect injection on edit.

Recommended approach: (1) Split `buildEntityDataArray()` into cohesive builders (`buildAddressVars()` , `buildTaxVars()` , `buildDateVars()`) coordinated by a small dispatcher; (2) replace ternary chains with lookup maps / value objects; (3) apply the **Strategy** pattern to `timeConstrainedResponse()` so per-entity include logic lives in per-domain resolvers rather than one branching method.

386 files affected.

			ternary chains with lookup maps
<code>.discovery-src/app/Mail/Engine/PaymentEmailEngine.php</code>	238, 271, 272, 273, 275, 276, 277, 278, 279, 280, 281	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/Import/ImportCompleted.php</code>	75	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/MigrationCompleted.php</code>	48, 51	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/RecurringInvoice/ClientContactRequestCancellationObject.php</code>	50	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/Subscription/OtpCode.php</code>	63	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/SupportMessageSent.php</code>	42, 77, 78, 79	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/TemplateEmail.php</code>	135, 148, 151	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Mail/VendorTemplateEmail.php</code>	127, 140	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Account.php</code>	229, 307	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Models/Backup.php</code>	77, 89, 110, 131	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Client.php</code>	537	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Company.php</code>	728	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Credit.php</code>	472	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Invoice.php</code>	715, 718, 721, 724, 728, 733	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Payment.php</code>	433, 470	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Presenters/ClientPresenter.php</code>	46, 51, 56	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Presenters/CompanyPresenter.php</code>	102	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Presenters/EntityPresenter.php</code>	80, 81, 82	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/PurchaseOrder.php</code>	470, 474	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Models/Quote.php</code>	530, 534, 539, 542	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Tag.php</code>	63	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/Task.php</code>	211, 212, 445	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Models/User.php</code>	810, 858	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Authorize/AuthorizeCreditCard.php</code>	263	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Authorize/AuthorizeTransaction.php</code>	127	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Authorize/ChargePaymentProfile.php</code>	107	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Authorize/RefundTransaction.php</code>	103	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/AuthorizePaymentDriver.php</code>	225, 262	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/BaseDriver.php</code>	621	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/PaymentDrivers/Blockonomics/Blockonomics.php</code>	83	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Braintree/CreditCard.php</code>	45, 300	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Braintree/PayPal.php</code>	136	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/BraintreePaymentDriver.php</code>	62	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CBAPowerBoard/CreditCard.php</code>	95, 369	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CheckoutCom/CheckoutSetupWebhook.php</code>	118	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CheckoutCom/CreditCard.php</code>	323	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CheckoutCom/CreditCardFlow.php</code>	74, 166, 188, 205	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CheckoutCom/Webhook.php</code>	46, 71	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/CheckoutComPaymentDriver.php</code>	172, 184, 195, 206	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/PaymentDrivers/EwayPaymentDriver.php</code>	49	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/FortePaymentDriver.php</code>	213	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/GoCardless/DirectDebit.php</code>	63	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/GoCardlessPaymentDriver.php</code>	101	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/PayPal/PayPalBasePaymentDriver.php</code>	117	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/PayTrace/CreditCard.php</code>	236	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/PaytracePaymentDriver.php</code>	191, 219, 237	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/PaywarePaymentDriver.php</code>	99	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/RotessaPaymentDriver.php</code>	170, 171, 246, 294	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Sample/CreditCard.php</code>	63	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/PaymentDrivers/SquarePaymentDriver.php</code>	70	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Stripe/ACH.php</code>	694	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/Stripe/ImportCustomers.php</code>	65	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/StripePaymentDriver.php</code>	662	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/PaymentDrivers/WePayPaymentDriver.php</code>	102	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/BaseRepository.php</code>	63, 89, 110	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/ClientRepository.php</code>	159	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/PaymentRepository.php</code>	218, 271	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/ProjectRepository.php</code>	91	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/RecurringExpenseRepository.php</code>	37	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Repositories/TaskRepository.php</code>	217	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Repositories/UserRepository.php</code>	112, 162, 185, 202, 233, 346	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Calendar/CalendarConnectionService.php</code>	111, 865, 866, 904, 915	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Chart/AnalyticsQueries.php</code>	717, 718	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Chart/CashFlowForecastService.php</code>	74, 155, 214, 280	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Chart/ChartService.php</code>	267, 275, 276, 277, 278	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Chart/ClientPaymentAnalyticsService.php</code>	45	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Client/Merge.php</code>	46	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/ClientPortal/InstantPayment.php</code>	191, 203	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/ClientPortal/LivewireInstantPayment.php</code>	139, 151	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/Company/CompanyTokenRotator.php</code>	33	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Credit/ApplyPayment.php</code>	175, 179	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Credit/MarkSent.php</code>	54	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Credit/SendEmail.php</code>	55, 58	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Gateway/MutatorUtil.php</code>	46	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Gateway/Storecove/Identifiers/StorecoveIdentifierValidator.php</code>	176, 183	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Gateway/Storecove/Identifiers/StorecoveSchemeResolver.php</code>	84, 98	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Gateway/Storecove/Routing/StorecoveRoutingRules.php</code>	94, 150	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Gateway/Storecove/Storecove.php</code>	134, 170	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Imports/UblEDocument.php</code>	300, 305	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/EDocument/Jobs/SendEDocument.php</code>	295, 296	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/FacturaEInvoice.php</code>	208, 209	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/France/FranceEReportCompiler.php</code>	242, 268	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/France/Models/B2BIInvoice.php</code>	130	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/France/Models/B2BIInvoiceLine.php</code>	77, 94	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/France/Models/B2BITaxSubtotal.php</code>	55, 56, 57	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/OrderXDocument.php</code>	45, 46	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/Peppol.php</code>	379, 381	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/Peppol/DK.php</code>	84	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/Peppol/PeppolPartyBuilder.php</code>	145, 334	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/EDocument/Standards/Peppol/R0.php</code>	188	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/RoEInvoice.php</code>	159, 265, 313, 349, 354, 359, 365	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/EDocument/Standards/ZugferdEDocument.php</code>	626	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Email/AdminEmail.php</code>	458, 459, 480, 481, 502, 503, 651, 677, 680	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Email/AdminEmailMailable.php</code>	68, 69	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Email/Email.php</code>	187, 669, 670, 754, 755, 768, 791, 792, 813, 814, 976, 1002 + 1	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/InboundMail/InboundMailEngine.php</code>	45, 46	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/ApplyPaymentAmount.php</code>	111, 112	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/HandleCancellation.php</code>	42, 57, 126	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/Invoice/InvoiceService.php</code>	639, 651	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/MarkInvoiceDeleted.php</code>	51	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/MarkPaid.php</code>	82, 194, 195	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/MarkSent.php</code>	65	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/SendEmail.php</code>	76	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/TriggeredActions.php</code>	104	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Invoice/UpdateReminder.php</code>	59, 72, 94, 107, 129, 142	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Payment/RefundPayment.php</code>	71, 172, 175	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Payment/UpdateInvoicePayment.php</code>	221	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/DesignExtractor.php</code>	27	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/Pdf/ImageFetcher.php</code>	62	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/JsonToSectionsAdapter.php</code>	244, 506, 507, 1524	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/PdfBuilder.php</code>	901, 1085, 1091, 1121, 1441, 1503, 1516	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/PdfConfiguration.php</code>	316	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/PdfMock.php</code>	84, 318, 319, 548	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/PdfService.php</code>	370	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Pdf/Purify.php</code>	161	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/PurchaseOrder/PurchaseOrderExpense.php</code>	59	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/PurchaseOrder/SendEmail.php</code>	70	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Helpers/Helper.php</code>	70, 72, 81, 372	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

<code>.discovery-src/app/Services/Quickbooks/Jobs/QuickbooksImport.php</code>	205, 236	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Models/QbTaxRate.php</code>	294, 296, 334, 438	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/QuickbooksService.php</code>	247, 467, 518, 549, 551, 612, 616, 624, 737, 741, 767, 806 +4	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Transformers/BaseTransformer.php</code>	68, 73	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Transformers/CompanyTransformer.php</code>	83, 90, 97	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Transformers/InvoiceTransformer.php</code>	303, 535	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Transformers/ProductTransformer.php</code>	40, 44	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quickbooks/Transformers/QuoteTransformer.php</code>	208	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps
<code>.discovery-src/app/Services/Quote/MarkSent.php</code>	47	High per-method cyclomatic complexity from dense conditional/ternary logic	Extract branch families into smaller helpers/Strategy handlers; replace ternary chains with lookup maps

H2. Large Classes CRITICAL

Benchmark: Largest class LOC = 2,410 (PdfBuilder); 26 files >1,000 LOC → falls in the **High Risk** band (Good <300 · Moderate 300–1000 · High Risk >1000).

The 26 backend files above 1,000 LOC (data-array providers excluded) concentrate many responsibilities in one class. Representative offenders:

```
2,410 app/Services/Pdf/PdfBuilder.php
2,243 app/Jobs/Company/CompanyImport.php
2,188 app/Jobs/Util/Import.php
2,112 app/Export/CSV/BaseExport.php
2,037 app/Services/Report/TaxPeriodReport.php
1,828 app/Services/Template/TemplateService.php
1,550 app/Services/Subscription/SubscriptionService.php
1,366 app/Http/Controllers/BaseController.php ← every API controller extends this
1,285 app/Utils/HtmlEngine.php
1,140 app/Models/Client.php / 1,140 app/Http/Controllers/InvoiceController.php
```

```
// app/Services/Pdf/PdfBuilder.php (2,410 LOC, ~361 decision points in the file)
class PdfBuilder
{
    // layout, sectioning, variable binding, HTML generation and PDF assembly all in
    one class
```

Why it matters here: **BaseController** (1,366 LOC) is inherited by every API controller, so its size and coupling are amplified across the whole HTTP surface. **PdfBuilder** and **TemplateService** are the product's document engine — their size makes the most business-critical code the hardest to change safely.

Recommended approach: (1) Decompose **PdfBuilder** by responsibility (layout → **PdfLayout**, variable binding → **PdfVariableBinder**, assembly → **PdfComposer**) under the Single Responsibility Principle; (2) pull shared behavior out of **BaseController** into focused traits/services so controllers stop inheriting 1,366 lines; (3) split **TaxPeriodReport** / **Import** into per-step domain services.

--	----	---	--

H3. Large Functions CRITICAL

Benchmark: Largest function LOC = ~786; 31 methods >200 LOC → falls in the **High Risk** band (Good <50 · Moderate 50–200 · High Risk >200).

The largest single methods (measured by span to the next declaration):

```
~786 app/Utils/HtmlEngine.php:127      buildEntityDataArray()
~613 app/Jobs/Company/CompanyExport.php:72
~431 app/Utils/VendorHtmlEngine.php:115
~381 app/Console/Commands/CreatePeppolTestData.php:106
~356 app/Services/Pdf/PdfMock.php:254  (three methods >300 in this one file)
~295 app/Repositories/BaseRepository.php:151 save()
~266 app/Http/Controllers/BaseController.php:707 timeConstrainedResponse()
~247 app/Http/Controllers/InvoiceController.php:501
```

```
// app/Repositories/BaseRepository.php:151 (~295 LOC)
public function save(array $data, $model, ...)
{
    // validation, relation sync, line-item handling, event dispatch, persistence –
    one method
```

Why it matters here: `BaseRepository::save()` is the shared write path for most entities; a ~295-LOC method here means every create/update flows through code no reviewer can hold in their head. Oversized methods force copy-paste when a variant is needed (see H4), spreading the risk further.

Recommended approach: (1) Extract cohesive steps from `save()` into helper methods (`syncRelations()` , `persistLineItems()` , `dispatchSaved()`); (2) break `buildEntityDataArray()` per H1; (3) route long console-command bodies (`CreateSingleAccount` , `CreatePeppolTestData`) through small seeder services.

H4. Business Logic Duplication HIGH

Benchmark: Duplicated business-rule code > 10% → falls in the **High Risk** band (Good <5% · Moderate 5–10% · High Risk >10%).

Backend — the invoice and vendor HTML engines are parallel implementations (1,285 vs 906 LOC), and the reminder-scheduling rule is mirrored across entities (208 LOC each, structurally parallel):

```
app/Utils/HtmlEngine.php      (1,285)
app/Utils/VendorHtmlEngine.php ( 906)  } parallel template-variable engines
```

```
app/Services/Invoice/UpdateReminder.php (208)  | same reminder algorithm,
app/Services/Quote/UpdateReminder.php   (208)  | entity-renamed
```

Frontend — every one of the 800 enterprise pages reimplements the same 40 "scoring" helpers inline (32,000 copies total), differing only by a literal multiplier:

```
// resources/js/enterprise/WorkOrders/WorkflowPage.tsx:64 (repeated
helper1..helper40)
const helper1 = (row: WorkflowRow): string => {
  const score = row.priority * 1 + row.name.length; // helper2 → * 2, helper3 → * 3
  ...
  return row.code + '::' + row.status + '::' + score;
};
```

Why it matters here: A change to reminder rules must be edited in two services; a change to how a row "score" is computed would need editing 32,000 copies. Bug fixes silently drift out of sync between the invoice and vendor engines. This is the classic "fix it everywhere it was pasted" tax.

Recommended approach: (1) Extract a shared `TemplateVariableEngine` with an entity strategy so `HtmlEngine` / `VendorHtmlEngine` become thin adapters; (2) hoist `UpdateReminder` into one generic `ReminderScheduler` parameterized by entity; (3) replace the per-page `helperN` families with a single shared `computeRowScore(row, weight)` utility.

<code>.discovery-src/resources/js/enterprise/WorkOrders/WorkflowPage.tsx</code>	64, 69, 74, 79, 84, 89, 94, 99, 104, 109, 114, 119 +28	40 copy-pasted per-row scoring helpers duplicated in every page	Replace with a single shared <code>computeRowScore(row, weight)</code> utility

H5. Duplicate Code (general) CRITICAL

Benchmark: Overall duplicate code ~60% → falls in the **High Risk** band (Good <5% · Moderate 5–10% · High Risk >10%).

The entire committed frontend is generated from two templates: **801 page components** (all exactly 305 LOC — 800 of them structurally identical) and **800 test files** (all exactly 404 LOC), totalling **567,224 LOC**. There is *no* hand-written frontend outside this scaffold (0 files under `resources/js` outside `enterprise/`).

```
// resources/js/enterprise/*/**Page.tsx – the same shell repeated 800x
export default function WorkOrdersWorkflowPage(): React.JSX.Element {
  const query = useQuery({ queryKey: ['WorkOrders','Workflow',filter,status], queryFn:
fetchWorkflowRows });
  const mutation = useMutation({ mutationFn: async (payload) => { /* inline
fetch('/api/v1/...') */ } });
  // ...only the entity/module names and helper multipliers differ between files
}
```

Why it matters here: Any cross-cutting change (API shape, error handling, styling, a lint-rule upgrade) must be applied across ~800 files. The duplication also inflates build times, bundle size, and review load, and buries any genuine component in noise.

Recommended approach: (1) Collapse the 800 pages into **one** parameterized `<ResourcePage entity=... module=.../>` primitive plus a config table; (2) generate the tests from a single shared harness rather than 800 copies; (3) delete the generator's output from source control and treat modules as data/config, not code.

800 files affected.

H9. Generated Dead / Boilerplate Code HIGH (additional)

Benchmark: ~60% of the codebase is generated LOC-padding → falls in the **High Risk** band (Good <5% · Moderate 5–15% · High Risk >15%).

`tools/generate_enterprise_modules.php` (754 LOC) states its own purpose in its header comment:

```
// tools/generate_enterprise_modules.php:5
/**
 * Bulk-generates Laravel + React enterprise modules to expand LOC footprint.
```

```
* Usage: php tools/generate_enterprise_modules.php
*/
```

It emits 80 modules × 10 entities = 800 React pages, each with 40 **helperN** functions and a mock-data fallback, plus matching test files:

```
// resources/js/enterprise/**Page.tsx – dead fallback returned when the API 404s
if (!response.ok) {
  return Array.from({ length: 12 }, (_, index) => ({ id: index + 1, name: 'Workflow '
+ (index + 1), /* fake rows */ }));
}
```

Why it matters here: 60% of the repository carries no distinct behavior — it is padding that dilutes every codebase metric, hides real code, and returns fabricated data to users when an endpoint is missing (silently masking outages). It is the root cause of H5 and H10.

Recommended approach: (1) Remove the generated **resources/js/enterprise/**** tree from source control; (2) retire **generate_enterprise_modules.php**; (3) if these modules are real features, express them as one component + a data-driven registry rather than 1,601 files.

800 files affected.

File	Line(s)	Issue	Action
.discovery-src/resources/js/enterprise/AnalyticsHub/AllocationPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring
.discovery-src/resources/js/enterprise/AnalyticsHub/AssignmentPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring
.discovery-src/resources/js/enterprise/AnalyticsHub/BatchPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring
.discovery-src/resources/js/enterprise/AnalyticsHub/CheckpointPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring
.discovery-src/resources/js/enterprise/AnalyticsHub/ItemPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring
.discovery-src/resources/js/enterprise/AnalyticsHub/MetricPage.tsx	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring

<code>.discovery-src/resources/js/enterprise/WorkOrders/WorkflowPage.tsx</code>	16	Generated boilerplate page with a mock-data fallback (dead code / fake data)	Delete generated scaffold; replace with a data-driven component and real API wiring

H10. Magic Numbers & Primitive Obsession MEDIUM (additional)

Benchmark: 800 pages express domain "logic" as bare literals/string concat → falls in the **Moderate** band (Good <5% · Moderate 5–15% · High Risk > 15%).

```
// resources/js/enterprise/*/**Page.tsx – magic multiplier + stringly-typed record
const score = row.priority * 7 + row.name.length;    // 7 is the only thing that
varies
return row.code + '::' + row.status + '::' + score;  // primitive obsession – no
value object
```

Why it matters here: The "score" has no name, unit, or type; the `code::status::score` string is parsed nowhere and means nothing — it is placeholder logic frozen into 32,000 functions. Real magic numbers elsewhere become impossible to distinguish from this noise.

Recommended approach: (1) Introduce a named `RowScore` value object with the weight as a documented constant; (2) once the scaffold is removed (H9), this hotspot largely disappears.

800 files affected.

<code>.discovery-src/resources/js/enterprise/TaxEngine/AllocationPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/TaxEngine/AssignmentPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/TaxEngine/BatchPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/TaxEngine/CheckpointPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/TaxEngine/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights

.discovery-src/resources/js/enterprise/TaxEngine/MetricPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TaxEngine/PolicyPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TaxEngine/RecordPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TaxEngine/SchedulePage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TaxEngine/WorkflowPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/AllocationPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/AssignmentPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/BatchPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/CheckpointPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/ItemPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/MetricPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/PolicyPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/RecordPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/SchedulePage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/TimesheetPlus/WorkflowPage.tsx	65, 70, 75, 80, 85, 90, 95, 100,	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object

	105, 110, 115, 120 +28		with documented weights
.discovery-src/resources/js/enterprise/Treasury/AllocationPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/AssignmentPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/BatchPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/CheckpointPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/ItemPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/MetricPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/PolicyPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/RecordPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/SchedulePage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/Treasury/WorkflowPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/VendorPortal/AllocationPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/VendorPortal/AssignmentPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/VendorPortal/BatchPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
.discovery-src/resources/js/enterprise/VendorPortal/CheckpointPage.tsx	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights

<code>.discovery-src/resources/js/enterprise/VendorPortal/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/VendorPortal/MetricPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/VendorPortal/PolicyPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/VendorPortal/RecordPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/VendorPortal/SchedulePage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/VendorPortal/WorkflowPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/AllocationPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/AssignmentPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/BatchPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/CheckpointPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/MetricPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/PolicyPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/RecordPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/SchedulePage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100,	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object

	105, 110, 115, 120 +28		with documented weights
<code>.discovery-src/resources/js/enterprise/Warehouse/WorkflowPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/AllocationPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/AssignmentPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/BatchPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/CheckpointPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/MetricPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/PolicyPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/RecordPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/SchedulePage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WebhookStudio/WorkflowPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/AllocationPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/AssignmentPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/BatchPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights

<code>.discovery-src/resources/js/enterprise/WorkflowEngine/CheckpointPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/MetricPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/PolicyPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/RecordPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/SchedulePage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkflowEngine/WorkflowPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/AllocationPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/AssignmentPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/BatchPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/CheckpointPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/ItemPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/MetricPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/PolicyPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/RecordPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100,	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object

	105, 110, 115, 120 +28		with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/SchedulePage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights
<code>.discovery-src/resources/js/enterprise/WorkOrders/WorkflowPage.tsx</code>	65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120 +28	Domain scoring encoded as magic multipliers and string concatenation	Extract a named RowScore value object with documented weights

Not observed / not measurable (rated n/a): H6 (High Churn), H7 (Defect-Prone Files), H8 (Ownership) — all require git history; the snapshot is a shallow clone with 10 commits, one author (`ksabai-gl`), and no fix/bug commit messages, so no meaningful churn/defect/ownership signal exists. See §2.3.

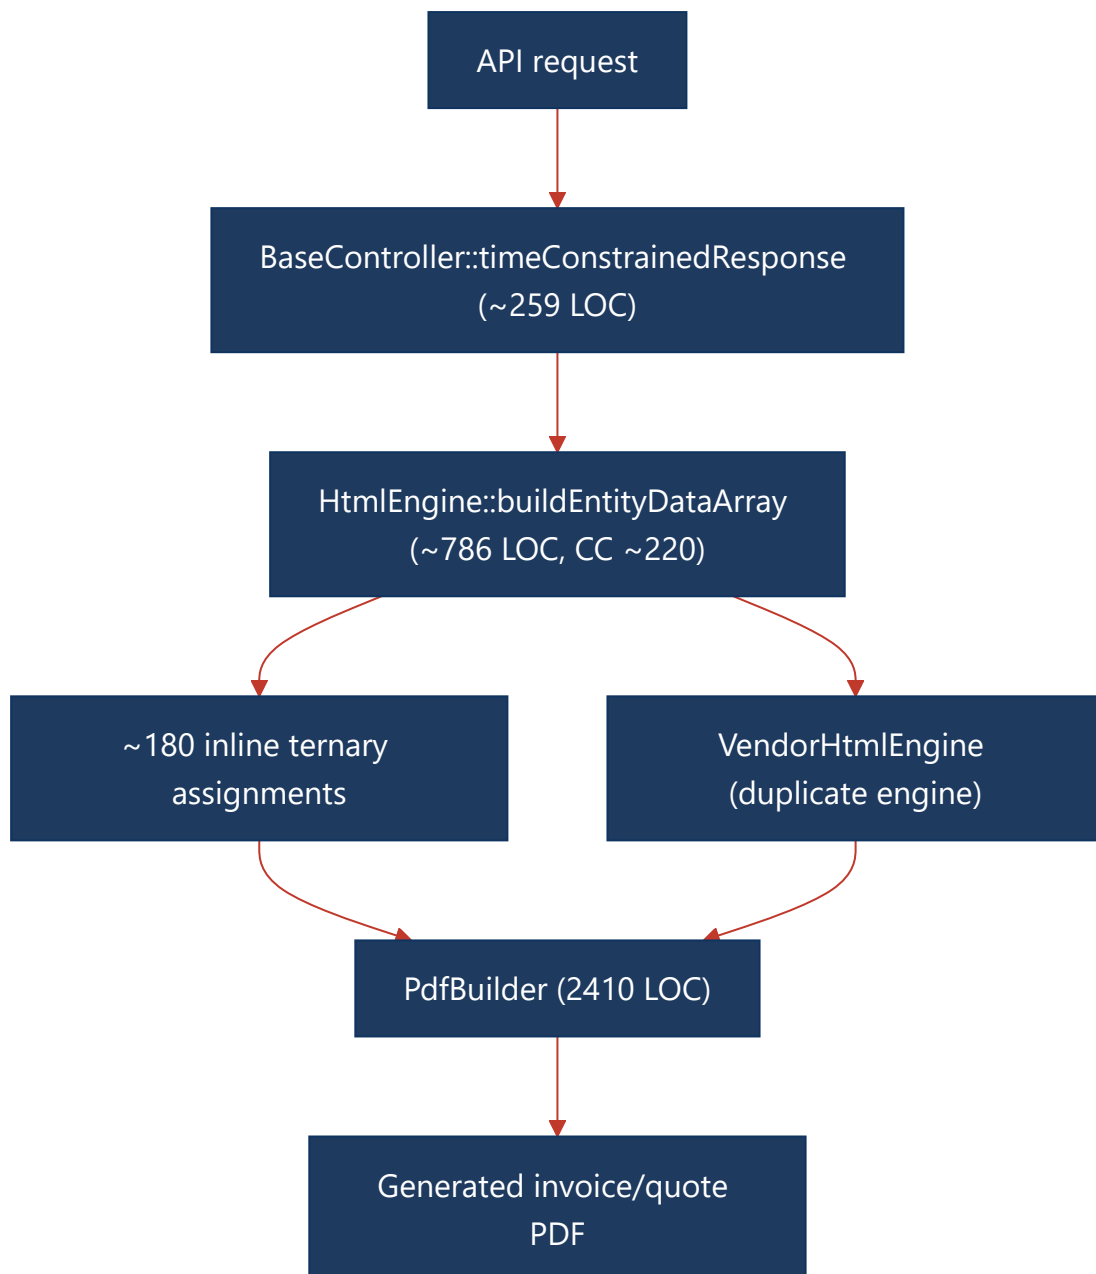

2.3 Code Churn & Stability Evidence

Git-history metrics are **not available** on this snapshot. The bridge provided a shallow clone containing **10 commits** (2026-07-27 → 2026-08-14), a **single author** (`ksabai-gl`), and **zero** commits whose message matches `fix` / `bug` / `hotfix` . The most-changed file was touched only 3 times. These volumes are far too small to compute churn, defect-proneness, or ownership, so H6–H8 are rated *n/a* and their weight is redistributed in the Hotspot Score.

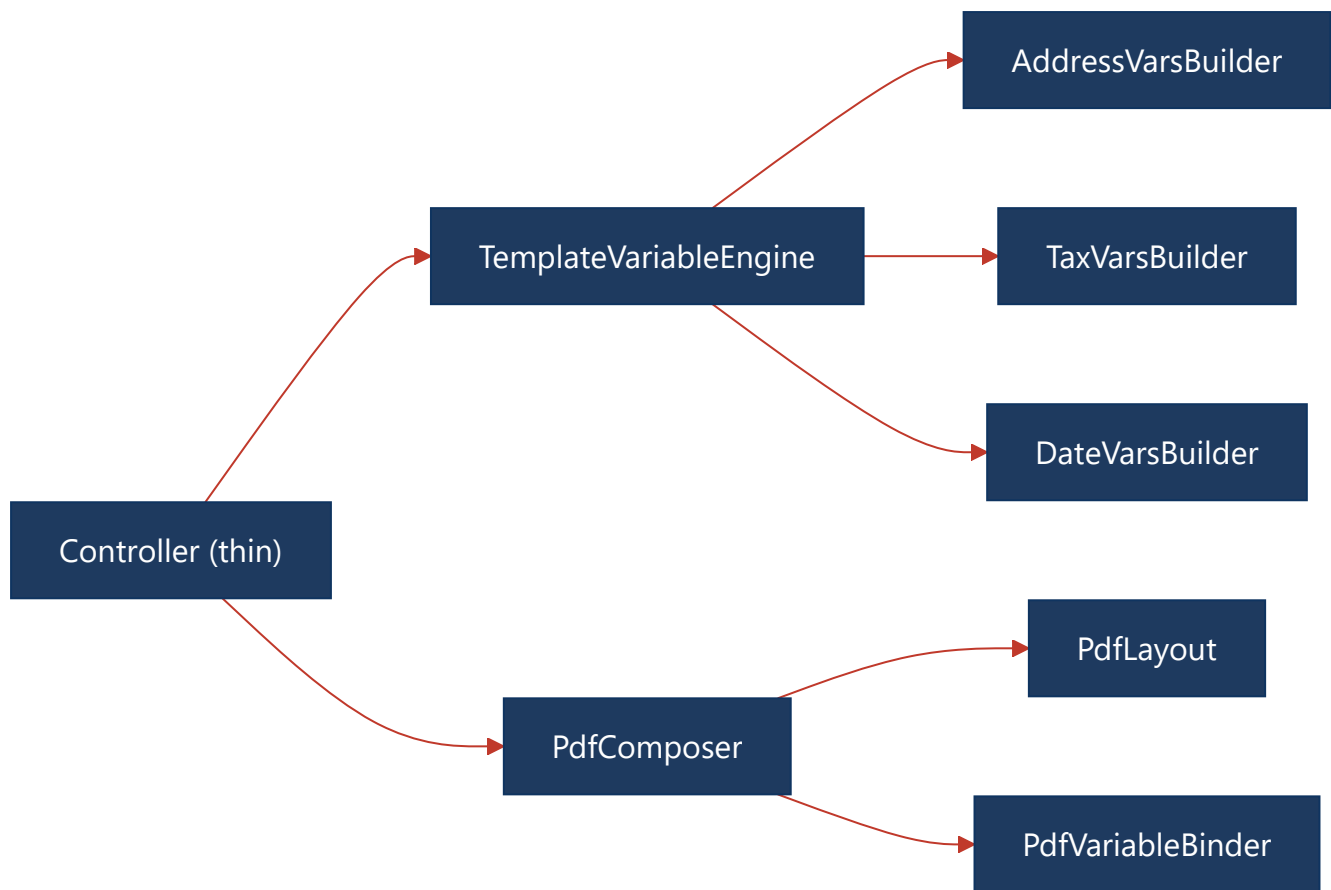

Signal	Observed on snapshot	Usable?
Commits in history	10 (shallow, recent-only)	No
Top file change frequency	<code>resources/views/klearcom/ivr-console.blade.php</code> — 3 changes	No
Fix/bug/hotfix commits	0	No
Distinct authors	1 (<code>ksabai-gl</code>)	No

Complexity / call-flow hotspot

Refactored target structure

Improvement roadmap

2.5 Actions Required

Hotspot	Action	Rating	Priority
H5 Duplicate Code	Collapse 800 near-identical enterprise pages into one parameterized <code>ResourcePage</code> primitive + config; generate tests from one shared harness	HIGH RISK	CRITICAL
H9 Generated Dead/Boilerplate Code	Remove the <code>resources/js/enterprise/**</code> scaffold from source control and retire <code>generate_enterprise_modules.php</code> ; drop mock-data fallbacks	HIGH RISK	CRITICAL
H2 Large Classes	Decompose <code>PdfBuilder</code> (2,410), <code>TemplateService</code> (1,828), <code>BaseController</code> (1,366) and 23 other >1,000-LOC files by responsibility (SRP)	HIGH RISK	CRITICAL
H3 Large Functions	Extract helper methods from <code>HtmlEngine::buildEntityDataArray</code> (786), <code>BaseRepository::save</code> (295), <code>CompanyExport</code> (~613) and 28 other >200-LOC methods	HIGH RISK	HIGH

H1 High Cyclomatic Complexity	Replace ternary chains with lookup maps; apply Strategy/Command to the include/template branch logic in <code>BaseController</code> and the HTML engines	HIGH RISK	HIGH
H4 Business Logic Duplication	Merge <code>HtmlEngine</code> / <code>VendorHtmlEngine</code> and <code>Invoice</code> / <code>QuoteUpdateReminder</code> into shared entity-parameterized services; unify the <code>helperN</code> scoring	HIGH RISK	HIGH
H10 Magic Numbers & Primitive Obsession	Introduce a named <code>RowScore</code> value object with documented weights (largely resolved once H9 scaffold is removed)	MODERATE	MEDIUM

2.6 Expected Outcomes

- **Repository shrinks by ~60%:** removing the generated scaffold (H5/H9) deletes ~567,000 LOC of near-duplicate code, restoring meaningful metrics, faster builds, and reviewable diffs.
- **Change amplification collapses:** an API-shape, styling, or scoring change is made once in a shared `ResourcePage` /service instead of across 800 cloned pages or 32,000 helper copies.
- **Billing-critical code becomes testable:** decomposed `PdfBuilder` , `HtmlEngine` , and `BaseRepository::save` collaborators can be unit-tested in isolation, protecting invoice/PDF generation from silent regressions.
- **Lower defect risk on edit:** eliminating methods with 40+ branches (H1) and 200+ LOC (H3) removes the highest-probability sites for defect injection.
- **No more fabricated data:** dropping the mock-data fallbacks stops the UI from silently returning fake rows when an endpoint is missing, surfacing real failures instead.
